From Symptoms to Solutions

Understanding Your Medication Options
Expert Care, Anywhere, Anytime

Types of Medications at Synergex Med

1

Conventional Medications

Standard, FDA-approved medications for pain, neurological conditions, or mental health disorders. These include common analgesics, antidepressants, anti-anxiety medications, and neurological drugs.

2

Unconventional Medications

Treatments that are less commonly used but have clinical evidence supporting their effectiveness in certain cases. Examples include specialized pain modulators, cognitive enhancers or supplements.

3

Off-Label Medications

Drugs prescribed for conditions outside of their FDA-approved indication, when clinical judgment and patient needs indicate they may help. Off-label use is carefully monitored for safety and efficacy.

What it's medication for

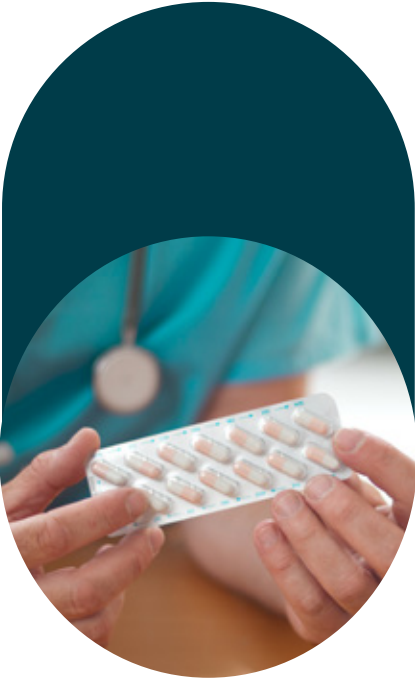

01

Medications at Synergex Med are designed to manage pain, neurological symptoms, or mental health conditions, depending on your needs. Conventional medications treat conditions with FDA-approved indications. Unconventional or off-label medications may be used when standard treatments aren't enough, always guided by clinical evidence.

For patients, this helps control symptoms and improve quality of life. For attorneys, accurate documentation of prescribed medications can support personal injury claims.

What will happen

02

During your visit, either in person or via telemedicine, your doctor will review your medical history, symptoms, and previous treatments.

They will explain which medications are appropriate, how they work, and potential side effects.

The plan may include conventional medications, or in some cases, unconventional or off-label options tailored to your specific condition. All medications are prescribed and monitored safely.

The background image shows a hand pouring water from a glass bottle into a glass. In the foreground, another hand is holding two pills, one white and one black. The entire image has a warm, yellowish tint.

What effects you can expect from this medications

03

Medication effects vary based on type and dosage. You may experience symptom relief, improved function, or mood stabilization. Some medications may take days or weeks to reach full effect. Side effects can occur, which is why careful monitoring and follow-ups are important.

What you can do on your own

What you can do on your own

What you can do on your own

04

Take medications exactly as prescribed

Track your symptoms and any side effects

Maintain a consistent schedule for doses

Communicate any new or worsening symptoms to your doctor

What you can do with your doctor

05

Adjust dosage or try alternative medications if needed

Combine medication with therapies for optimal results

Receive guidance on managing side effects

Use telemedicine for convenient check-ins and ongoing support

SYNERGEXMED

PAIN MANAGEMENT & NEURO

What Can We Do For You?

At Synergex Med, we provide **in-person visits and procedures** for pain management and neurology, ensuring fast, expert care when you need it most. For psychology, psychiatry, and neuropsychology, we offer **secure appointments**, making evaluations, therapy, and medication management accessible anywhere.

We work with both patients, delivering accurate diagnoses, evidence-based treatments, and detailed medical reports.
